

FAX TRANSMITTAL

To: John Mayers - Jim Hunt
From: Marco A. Raez
Date: January 16th. 1996.
Ref: Replacement of Well LO6-20.

As per our discussions in Negritos, last Dec.8'95, and the way to replace well LO6-20 with HGOR, we feel that well LO7-23, which found a wet Upper Basal Salina, could be used, if a window in the 5 1/2" csg. is opened at 6,129 ft. approx. This could fulfill the drainage of the south-western part of the block in the Upper Basal Salina, with a minor investment, and taking advantage of the Petrex rig over the platform LO7. The proposed well should be 2,300 ft. west and in strike of well LO7-15.

Attached please find the proposed prognosis for well LO7-23R.

Your comments will be appreciated.

Best regards,

Marco A. Raez
